## PA 5 / PA 5 Portable Microphone and Mute Adjustment Instructions

Thanks for purchasing our Ready2Talk PA 5 system. As you know, there is an AUX input socket on the front of your PA system which allows you to play from your phone or MP3 player music while on tour. Your PA 5 is factory set to cut off the music when you turn on your microphone but you can adjust the amount of muting to any amount from 0% to 100%.

### Adjustment instructions

- Remove the 4 screws holding the case together and separate the front from back, exposing the two adjustment pots on the PA board.
- Hold the box with the wires coming out of the bottom of the box.
- Mic Gain adjustment is the top pot in the middle of the PC board. (not shown in this pic)  
**The mic is set at the lowest setting and DO NOT adjust unless necessary**
- Muting Control adjustment is the pot closest to the 3.5mm front AUX input, closest to the bottom of the PA.
  - Turning clockwise = more muting / less music while talking
  - Turning counter clockwise = less muting / more music while talking
